At Agincourt G. A. Henty 2011-02 With 36 pages of additional articles, references, and bibliographies of recommended reading. Agincourt is the quintessential English battle. Outnumbered English forces meet the French on the battlefield, and through courage, tenacity, (and a wicked Welsh weapon called a longbow), they win the day. While Henry V was triumphant, and was immortalized by Shakespeare for his victory, his gains were later squandered by his son, Henry VI, so ultimately not much was accomplished. In this Henty book, Guy Aylmer is an English squire and the son of a knight. He travels to Villeroy, in France, where his lord has a castle, but is swept up in it's defense when it is attacked by Orleanist forces. He winds-up as a prisoner in Paris where he and his charges are assaulted by the White Hoods-the butchers of Paris. After several adventures and escapes he later returns to France with King Henry V and fights in the Battle of Agincourt. Henty’s History Series Learning History Through Fiction The Henty series is a unique way of learning about history. It consists of over 80 novels, each written by George A. Henty, and each featuring a significant historical person, period or event. * Perfect for busy people who have never lost their desire to learn. * An ideal way for homeschool students to learn history. * Organized by time period. * With additional nonfiction articles and a bibliography of recommended reading. "If you want to fall in love with history, there is simply no better way to do it than this."

Handbook of Graphs and Networks Stefan Bornholdt 2006-03-06 Complex interacting networks are observed in systems from such diverse areas as physics, biology, economics, ecology, and computer science. For example, economic or social interactions often organize themselves in complex network structures. Similar phenomena are observed in traffic flow and in communication networks as the internet. In current problems of the Biosciences, prominent examples are protein networks in the living cell, as well as molecular networks in the genome. On larger scales one finds networks of cells as in neural networks, up to the scale of organisms in ecological food webs. This book defines the field of complex interacting networks in its infancy and presents the dynamics of networks and their structure as a key concept across disciplines. The contributions present common underlying principles of network dynamics and their theoretical description and are of interest to specialists as well as to the non-specialized reader looking for an introduction to this new exciting field. Theoretical concepts include modeling networks as dynamical systems with numerical methods and new graph theoretical methods, but also focus on networks that change their topology as in morphogenesis and self-organization. The authors offer concepts to model network structures and dynamics, focussing on approaches applicable across disciplines.
