**Criminal Law** Paul H. Robinson 2020-09-15 Criminal Law: Case Studies and Controversies eschews traditional reliance on judicial opinions in favor of an innovative and dynamic method of criminal law instruction that is centered on statutory interpretation and case studies. Examination of real-world problems allows first-year law students to not only develop familiarity with the criminal law doctrine necessary for potential careers as prosecutors or defense attorneys, but also hone crucial skills for lawyering in general. Provocative case studies provide background for engaging class discussion and challenge students to tackle applying doctrine in real-world situations. When useful, the book provides actual cases from a variety of jurisdictions to further illuminate the concepts with which students have already been forced to grapple. New to the Fifth Edition: Additional and updated case studies and discussion material informed by the professors' teaching experiences and designed to reinforce issues at the forefront of modern criminal law Streamlined chapters throughout the whole casebook for a more efficient and concise textbook. Professors and students will benefit from: Use of an innovative case studies method - Each topic area includes a detailed story about the people and events leading up to the offense Inclusion of photographs related to the crimes so students can better contextualize issues "Core opinions" of central historical, theoretical, or doctrinal importance in each subject-area section Provocative and timely principal cases from a wide variety of jurisdictions, each followed by the statutes that existed in the jurisdiction at the time of the offense Treatise-like summaries of law in each topic area give students an overview of the law, introduce the underlying theoretical principles, and provide context

Emissions Reduction Through Better Traffic Management 2001 The objectives of this study were to: (1) evaluate a new low-cost approach for

measuring on-road tailpipe emissions of highway vehicles; (2) investigate factors that affect the amount and variability of on-road emissions, using statistical methods; and (3) devise and demonstrate methods for designing and conducting observational experiments that realistically evaluate pollution prevention strategies for on-road vehicles. Portable instruments were used for measuring carbon monoxide (CO), nitric oxide (NO), and hydrocarbon (HC) emissions and vehicle activity (e.g., vehicle speed, engine parameters) on a second-by-second basis. Data collection, quality assurance, reduction, and analysis protocols were developed. Field data collection occurred in a pilot and an evaluation phase. In total, over 1,200 one-way trips were made with more than 20 vehicles, 4,000 vehicle-miles traveled, 160 hours of data, and 10 drivers. The pilot study was used to identify key factors influencing on-road emissions and as input to the design of the evaluation study. In the evaluation study, data were collected intensively with a small number of vehicles on two corridors before and after signal timing and coordination changes were implemented. For the first corridor, changes in signal timing and coordination did not result in a significant change in traffic flow or emissions. However, substantial reductions in emissions were estimated for uncongested versus congested traffic flow when comparing travel in the same direction at different times of day. For the second corridor, there were significant improvements in traffic flow and some reduction in emissions for three of the four time period and travel direction combinations evaluated. The impact of signal timing and coordination changes with respect to non-priority movements involving cross-streets was evaluated. For the first corridor, there was no statistically significant observed change in emissions for non-priority movements. For the second corridor, there typically was a decrease in average speed and an increase in emissions for non-priority movements; however, many of the observed changes were not statistically significant. The study also demonstrated other analysis methods, including: (a) macro-scale analysis of trip average emissions and traffic parameters; (b) micro-scale analysis of second-by-second emissions and vehicle operation; (c) mesoscale analysis of modal emission rates; and (d) spatial analysis of emissions at specific locations along the corridors. Both statistical and theoretical-based approaches were evaluated. The implications of the study results for pollution prevention strategies are discussed. Conclusions are presented regarding instrumentation, protocols, analysis techniques, and case study-specific findings. Recommendations are given regarding future applications of on-board measurements.

**Murder in Connecticut** Michael Benson, author of *The Devil at Genesee Junction* 2008-09-24 DIVAn incisive, unflinching account of the shocking, summer 2007 Connecticut crime that is still making national headlines, *Murder in Connecticut* examines what happened to Dr. William Petit, his wife Jennifer Hawke-Petit, and their two daughters, Hayley and Michaela, in the early morning hours of July 23 in the quiet town of Cheshire--and how their community rallied bravely around the sole survivor of this vicious home invasion. Who was the Petit family? How were they marked for murder by their killers, Joshua Komisarjevsky and Steven Hayes? How could these men have dreamed up such a crime? And will these horrifying murders--with startling similarities to the case in Truman Capote's classic *In Cold Blood*--really be the impetus behind sweeping parole reform laws that will not only affect Connecticut, but all of America? /div
