Chapter List Telecom 101 is composed of three parts: Fundamentals of Telecommunications, Telecommunications Technologies, and the IP Telecommunications Network. PART I FUNDAMENTALS OF TELECOMMUNICATIONS 1 INTRODUCTION 2 FUNDAMENTALS OF TELEPHONY 3 SWITCHING 4 THE TELECOMMUNICATIONS INDUSTRY We begin with the fundamentals of telephony and the telephone network - the basis for understanding everything else. First is the Public Switched Telephone Network (PSTN): loops and trunks, circuit-switching, analog, the voiceband and Plain Ordinary Telephone Service (POTS). Plus, new for the fourth edition: Voice over IP (VoIP) is now part of the fundamentals. Next is switching, starting with traditional telephone switches: Centrex, PBX and PBX trunks, and how that relates to the newer ideas of softswitches, Hosted PBX and SIP trunking. This part is completed with a chapter on the telecommunications business: Local Exchange Carriers and Inter-Exchange Carriers, ILECs and CLECs, the main players and how carriers interconnect. PART II TELECOMMUNICATIONS TECHNOLOGIES 5 DIGITAL 6 TRANSMISSION SYSTEMS 7 THE NETWORK CLOUD AND SERVICE PROVISIONING 8 FIBER OPTICS 9 DSL AND CABLE MODEMS: LAST MILE ON COPPER 10 WIRELESS The second part is devoted to telecommunications technologies: the actual methods used to implement circuits and services. We begin with digital: what digital is, how voice and video are digitized, and how digitized information is actually transmitted. The next chapter is transmission systems: the high-capacity systems developed to carry many users' traffic. This starts with the installed base of channelized systems, the hierarchy of DS0, DS1 and DS3 rates and an overview of T1, T3, SONET and ISDN. Then our attention turns to the new generation packetized systems, introducing the concepts of overbooking and bandwidth on

demand instead of channels, how this is implemented with frames and packets, coexistence and transition from channels to packets. Then we understand the "Network Cloud", how services are actually implemented, the three basic types of services and the equipment used for each. Completing this part are chapters on the technologies used to implement the network: Fiber Optics, including fundamentals of fiber, wave-division multiplexing, the network core, Metropolitan Area Networks, Passive Optical Networks and fiber to the premise. Last Mile on Copper: DSL and Cable Modems, including fundamentals of modems, DSLAMs, VDSL, broadband and cable modems. Wireless, concentrating on mobile communications: cellular and mobility concepts, the technologies TDMA, CDMA and OFDM, the generations from 1G to 4G, and the systems GSM, UMTS, 1X and LTE. This chapter is completed with WiFi and satellite. PART III THE IP PACKET-SWITCHED TELECOM NETWORK (IP-PSTN) 11 "DATA" COMMUNICATIONS CONCEPTS 12 CODING, FRAMES AND PACKETS 13 THE OSI LAYERS AND PROTOCOL STACKS 14 ETHERNET, LANS AND VLANS 15 IP NETWORKS, ROUTERS AND ADDRESSES 16 MPLS AND CARRIER NETWORKS 17 THE INTERNET 18 WRAPPING UP The third part of Telecom 101 is dedicated to the new-generation IP telecommunications network. We begin by understanding how convergence was achieved by treating voice and video like data - then accordingly, cover the fundamentals of what used to be called "data communications": DTEs, DCEs, LANs and WANs and the crucial concepts of packets and frames. There are so many functions that need to be performed to implement phone calls, television, web browsing, email and everything else over the IP network, a structure is necessary to be able to identify and discuss separate issues separately. For this purpose, there is a chapter on the OSI Reference Model and its layers, identifying what the layers are, examples of protocols for each layer and how they work together in a protocol stack. Then we begin moving up the layers. The next chapter is on Ethernet, LANs and VLANs (Layer 2), including MAC addresses and MAC frames, LAN cables, Optical Ethernet, LAN switches and how VLANs are used to separate traffic. The next chapter is all about IP (Layer 3): how routers implement the network, routing tables, IP addresses, subnets, IPv4 address classes, static addresses, dynamic addresses and DHCP; public addresses, private addresses and NAT; and an overview of IP version 6. On a real-world telecom network, a traffic management system is required. This is implemented with a technique called in general virtual circuits, and in particular with MPLS. The next chapter in the book covers the fundamentals, briefly reviews legacy technologies X.25, Frame Relay and ATM, then focuses on MPLS and how it is used to implement VPNs, Class of Service, service integration and traffic aggregation. The last main chapter is on the Internet: its origins, what an ISP is and how an ISP connects to the rest of the Internet via transit and peering, the web, the Domain Name System, HTML and HTTP, SSL, MIME and base-64 encoding for email, Internet telephony and Internet VPNs vs. business customer "MPLS service". The final chapter is a summary and wrap-up, covering technology deployment from the top down, useful reference charts listing all of the technologies, standard network designs and ending with a look at The Future. APPENDICES Telecommunications technology is in constant change - and some technologies that used to be of prime importance are not so important today, and so have been moved from the main part of the book into appendices. The very last part of the book provides a comprehensive list decoding mainstream acronyms and abbreviations used in telecom. A ALL ABOUT T1 B LEGACY VOICE SERVICES AND JARGON C ACRONYMS AND ABBREVIATIONS Telecom 101 7" x 9" softcover textbook • 488 pages 4th edition • Published March 2016 print ISBN 9781894887038 eBook ISBN 9781894887786 Get your copy today!

**Your Model Horse Collection Reference Guide 2017** Kristin Chernoff 2017-07-04 Breyerfest 2017 Edition. When I had 100 models I could still remember what I owned. When I had 300 models I computerized my records - and crated the first version of this list. That was years ago. Breyer had added thousands of new models and hundreds of new molds. New (and old) companies have come and gone, or changed names. I'm always looking for more information, especially for companies and models not listed in this book. Detail start to escape me - was that the bay with 3 socks and black hooves, or the bay with 3 socks and pink hooves, of the bay with

4 socks version? There is just too much information to remember. I'm an avid collector. When I first started in the hobby, there were no books available, just box catalogs. This book is meant to be a record of YOUR collection. It is meant to be written in. You can mark if you own it or just want it. You can even write in a name for your model under the notes section. See you at Breyerfest!
