Systematic Theology: Volume II - The Doctrine of Man

Augustus Hopkins Strong 2017-04-09 This volume starts off by ending the last part of the first volume and then going into the human doctrine that is taught in the Bible. Such topics such as the nature of humanity, the nature of sin and what makes up the image of God within us is the bulk of the topics that are covered within this work. Finishing off is some talk on the doctrine of the work and office of Christ and the topic of salvation and how that works out theologically.

Mission, Science, and Race in South Africa Keith Snedegar 2015-09-17 This book examines the cultures of colonial science, missionary education, and racial politics in South Africa through the life of A. W. Robert, a key participant in all three fields. This study gives insight into the porous nature of categories such as missionary evangelism, research in the physical sciences, and racial politics, which are traditionally segregated from one another in historical discourse.

Bones and Bodies Alan G Morris 2022-01-15 Alan G. Morris critically examines the history of evolutionary anthropology in South Africa, uncovering the often racist philosophical motivations of these physical anthropology researchers and the discipline itself South Africa is famed for its contribution to the study of human evolution. In *Bones and Bodies* Alan G. Morris takes us back over the past century of anthropological discovery in South Africa and uncovers the stories of the individual scientists and how they contributed to our knowledge of the peoples of southern Africa, both ancient and modern. Not all of

this history is one which we should feel comfortable with, as much of the earlier anthropological studies have been tainted with the tarred brush of race science. Morris critically examines the work of Raymond Dart, Thomas Dreyer, Matthew Drennan, and Robert Broom who all described their fossil discoveries with the mirror of racist interpretation, as well as the life and times in which they worked. Morris also considers how modern anthropology tried to rid itself of the stigma of these early racist accounts. In the 1960s and 1970s, Ronald Singer and Phillip Tobias introduced modern methods into the discipline that jettisoned much of what the public wished to believe about race and human evolution. Modern methods in physical anthropology rely on sophisticated mathematics and molecular genetics but are difficult to translate and sometimes fail to challenge preconceived assumptions. In an age where the authority of the expert and empirical science is questioned, this book shows the battle facing modern anthropology in how to explain science in a context that seems to be at odds with life experience. In this highly accessible insider account, Morris examines the philosophical motivations of these researchers and the discipline itself. Much of the material draws on old correspondence and interviews as well as from published resources.

Systematic Theology : Volume II (Illustrated) Augustus Hopkins Strong 2014-04-03 "The Christ in whom are hid all the treasures of wisdom and knowledge himself furnishes all the needed safeguards and limitations. It is only because Christ has been forgotten that nature and [pg viii]law have been personified, that history has been regarded as unpurposed development, that Judaism has been referred to a merely human origin, that Paul has been thought to have switched the church off from its proper track even before it had gotten fairly started on its course, that superstition and illusion have come to seem the only foundation for the sacrifices of the martyrs and the triumphs of modern missions. I believe in no such irrational and atheistic evolution as this. I believe rather in him in whom all things consist, who is with his people even to the end of the world, and who has promised to lead them into all the truth."

South African Journal of Marine Science 1985

A Cautious Silence Geoffrey G. Gray 2007 The first exploration of modern Australian social anthropology, this study examines the forces that helped shaped its formation and reveals the struggles to establish and consolidate anthropology in Australia as an academic discipline. Once demonstrating that their discipline was the predominant interpreter of Indigenous life, anthropologists have assisted government in the control, development, and advancement of Indigenous peoples.
