How to Thrive in the Digital Age Tom Chatfield 2012-05-10 Our world is, increasingly, a digital one. Over half of the planet's adult population now spend more of their waking hours 'plugged in' than not, whether to the internet, mobile telephony, or other digital media. To email, text, tweet and blog our way through our careers, relationships and even our family lives is now the status quo. But what effect is this need for constant connection really having? For the first time, Tom Chatfield examines what our wired life is really doing to our minds and our culture - and offers practical advice on how we can hope to prosper in a digital century. One in the new series of books from The School of Life, launched May 2012: How to Stay Sane by Philippa Perry How to Find Fulfilling Work by Roman Krznaric How to Worry Less About Money by John Armstrong How to Change the World by John-Paul Flintoff How to Thrive in the Digital Age by Tom Chatfield How to Think More About Sex by Alain de Botton

Calculus for Scientists and Engineers William L. Briggs 2012-02 Drawing on their decades of teaching experience, William Briggs and Lyle Cochran have created a calculus text that carries the teacher's voice beyond the classroom. That voice—evident in the narrative, the figures, and the questions interspersed in the narrative—is a master teacher leading readers to deeper levels of understanding. The authors appeal to readers' geometric intuition to introduce fundamental concepts and lay the foundation for the more rigorous development that follows. Comprehensive exercise sets have received praise for their creativity, quality, and scope. This book is an expanded version of Calculus: Early Transcendentals by the same authors, with an entire chapter devoted to differential equations, additional sections on other topics, and additional exercises in most sections.

Atlas of Cytoarchitectonics of the Adult Human Cerebral Cortex Constantin Freiherr von Economo 2007-01-01 First English edition of a rare gem in the neurological sciences A milestone in neuroscience research, this high-profile Atlas depicts the cellular structure of practically every area of the human cortex with direct applications to current research in brain function. The entirety of the 112 original microphotographic plates, brilliant achievements in scientific microphotography and representing the 107 cytoarchitectonic areas of the human cerebral cortex, are reproduced in full size - large enough to be used for teaching purposes. An extensive introduction places the cytoarchitectonic studies of von Economo and Koskinas in a historical as well as a modern perspective, summarizing the essence of their findings and providing Brodmann area correlations. Biographies of von Economo and Koskinas and complete listings of their hard-to-find works are included in the Appendix. Originally published in German in 1925, it was considered a 'royal gift to science'. Revising Brodmann's nomenclature of 1909, the Nobel prize nominee von Economo and his colleague Koskinas took cytoarchitectonics to a new zenith, filling in gaps left by Brodmann on normal cortical structure, and documenting detailed findings in the frontal, parietal, temporal and occipital lobes, the insula, hippocampus, and superior limbic region. Far from being of purely academic or historical interest, this essential guide for all research on the cerebral cortex is of fundamental value to investigators in the brain and behavioral sciences, including basic, cognitive and evolutionary neuroscience, neuroanatomy, neurophysiology, neuroimaging, neuropsychology and neurolinguistics, as well as to physicians in the clinical fields of neurology, neuropathology, neurosurgery and psychiatry.

USB Embedded Hosts Jan Axelson 2011-11-01 Developers who want to access USB devices from their embedded systems will find a helpful resource in *USB Embedded Hosts: The Developer's Guide*. This new book from the author of *USB Complete* shows how small systems can take advantage of the same wealth of USB devices available to conventional PCs. The book begins with a review of USB host communication protocols. Readers then learn which USB host requirements are relaxed for embedded systems and what new requirements some embedded systems must meet. To help in selecting a development platform, the book explores available hardware and software for USB host communications in small systems. The heart of the book focuses on communicating with USB devices. The topics (with example code) include USB drives, keyboards, virtual serial ports, network bridges, mics, speakers, video cameras, and printers, plus devices that don't fit defined USB classes. Also discussed are systems that support both USB host and device functions. The example code is written for the BeagleBoard-xM open development board using a distribution of Linux targeted to small systems. Also covered is how to use Linux commands and utilities to learn about, monitor, and debug communications with USB devices.

Presidio Randy Kennedy 2019-08-06 “Fluent, mordant, authentic, propulsive...wonderfully lit from within” (Lee Child, *The New York Times Book Review*), this critically acclaimed, stunningly mature literary debut is the darkly comic story of a car thief on the run in the gritty and arid landscape of the 1970s Texas panhandle. In this “stellar debut,” (Publishers Weekly) car thief Troy Falconer returns home after years of wandering to reunite with his younger brother, Harlan. The two set out in search of Harlan's wife, Bettie, who's left him cold and run away with the little money he had. When stealing a station wagon for their journey, Troy and Harlan find they've accidentally kidnapped a Mennonite girl, Martha Zacharias, sleeping in the back of the car. But Martha turns out to be a stubborn survivor who refuses to be sent home, so together, these unlikely road companions haphazardly attempt to escape across the Mexican border, pursued by the police and Martha's vengeful father. But this is only one layer of Troy's story. Through interjecting entries from his journal that span decades of an unraveling life, we learn that Troy has become so estranged from society that he's shunned the very idea of personal property. Instead of claiming possessions, he works motels, stealing the suitcases and cars of men roughly his size, living with their things until those things feel too much like his own, at which point he finds another motel and vanishes again into another man's identity. Richly nuanced and complex, “like a nesting doll, [Presidio] continually uncovers stories within stories” (Ian Stansel, author of *The Last Cowboys of San Geronimo*). With a page-turning plot, prose as gritty and austere as the novel's Texas panhandle setting, and a determined yet doomed cast of characters ranging from con artists to religious outcasts, this “rich and rare book” (Annie Proulx, author of *Barkskins*) packs a kick like a shot of whiskey. Perfect for fans of Cormac McCarthy, Denis Johnson, and Larry McMurtry, who said that Kennedy “captures the funny yet tragic relentlessness of survival in an unforgiving place. Let's hope he keeps his novelistic cool and brings us much, much more.”

Travels Through Spain and Portugal, in 1774; With a Short Account of the Spanish Expedition Against Algiers, in 1775 WILLIAM DALRYMPLE 2018-04-20 The 18th century was a wealth of knowledge, exploration and rapidly growing technology and expanding record-keeping made possible by advances in the printing press. In its determination to preserve the century of revolution, Gale initiated a revolution of its own: digitization of epic proportions to preserve these invaluable works in the largest archive of its kind. Now for the first time these high-quality digital copies of original 18th century manuscripts are available in print, making them highly accessible to libraries, undergraduate students, and independent scholars. Rich in titles on English life and social history, this collection spans the world as it was known to eighteenth-century historians and explorers. Titles include a wealth of travel accounts and diaries, histories of nations from throughout the world, and maps and charts of a world that was still being discovered. Students of the War of American Independence will find fascinating accounts from the British side of conflict. ++++ The below data was compiled from various identification fields in the bibliographic record of this title. 50 Ways to Hex Your Lover Linda Wisdom 2008-03-01 "Wickedly fun!" --Romantic Times "Clever writing, a high sensuality factor and an unfettered imagination..." --Publishers Weekly Jazz can't decide whether to scorch him with a fireball or jump into bed with him. Jasmine Tremaine, a witch who can't stay out of trouble. Nikolai Gregorovich, a drop-dead gorgeous vampire cop on the trail of a serial killer. The sizzling love affair between Jazz and Nick has been off-again, on-again-for about 300 years. Mostly off, lately. But now Nick needs Jazz's help, and while Jazz and Nick try to figure out their own hearts and resist their ever-increasing attraction, they must steer clear of a maniacal killer with super-supernatural powers. They are surrounded by a hilarious cast of oddball paranormal characters, including Irma, the chain-smoking ghost who haunts Jazz's sports car, Dweezil, her ghoul of a boss, and Fluff and Puff, a pair of bunny slippers with sharp teeth and short tempers (watch your ankles)!

Cellular Structure of the Human Cerebral Cortex Constantin von Economo 2009-01-01 Originally published in German and French, the work is considered to be unsurpassed in both its scientific eloquence and accurate photographic documentation. Revising Brodmann's cortical parcellation system, von Economo took cytoarchitectonics to a new zenith.>The revised edition contains newly compiled tables with extensive quantitative data on the 107 cytoarchitectonic areas of Economo and Koskinas, plus all the 'transition' areas and full reproductions of the original microphotographs. It also contains the concluding chapter that appeared only in the 1929 English edition, with Economo's later views on cytoarchitectonic neuropathology and evolutionary neuroscience, enriched with material and figures from his later studies. Last but not least a newly discovered manuscript by Georg N. Koskinas, appears in English for the first time. In it, Economo's collaborator presents an insightful analysis of the 'General Part' of their larger textbook of cytoarchitectonics.

Rusch to Glory Rebecca Rusch 2014-10-01 Rebecca Rusch is one of the great endurance athletes of our time. Known today as the Queen of Pain for her perseverance as a relentlessly fast runner, paddler, and mountain bike racer, Rusch was a normal kid from Chicago who abandoned a predictable life for one of adventure. In her new book Rusch to Glory: Adventure, Risk & Triumph on the Path Less Traveled, Rusch weaves her fascinating life's story among the exotic locales and extreme conditions that forged an extraordinary athlete from ordinary roots. Rusch has run the gauntlet of endurance sports over her career as a professional athlete-- climbing, adventure racing, whitewater rafting, cross-country skiing, and mountain biking--racking up world championships along the way. But while she might seem like just another superhuman playing out a fistful of aces, her empowering story proves that anyone can rise above self-doubt and find their true potential. First turning heads with her rock climbing and paddling skills, Rusch soon found herself spearheading adventure racing teams like Mark Burnett's Eco-Challenge series. As she fought her way through the jungles of Borneo, raced camels across Morocco, threaded the rugged Tian Shan mountains, and river-boarded the Grand Canyon in the dead of winter, she was forced to stare down her own demons. Through it all, Rusch continually redefined her limits, pushing deep into the pain cave and emerging ready for the next great challenge. At age 38, Rusch faced a tough decision: retire or reinvent herself yet again. Determined to go for broke, she shifted her focus to endurance mountain bike racing and rode straight into the record books at a moment when most athletes walk away. Rusch to Glory is more than an epic story of adventure; it is a testament to the rewards of hard work, determination, and resilience on the

long road to personal and professional triumph.

Probability and Statistics with Applications: A Problem Solving Text Leonard Asimow, Ph.D., ASA 2015-06-30 This text is listed on the Course of Reading for SOA Exam P. Probability and Statistics with Applications is an introductory textbook designed to make the subject accessible to college freshmen and sophomores concurrent with Calc II and III, with a prerequisite of just one semester of calculus. It is organized specifically to meet the needs of students who are preparing for the Society of Actuaries qualifying Examination P and Casualty Actuarial Society's new Exam S. Sample actuarial exam problems are integrated throughout the text along with an abundance of illustrative examples and 870 exercises. The book provides the content to serve as the primary text for a standard two-semester advanced undergraduate course in mathematical probability and statistics. 2nd Edition Highlights Expansion of statistics portion to cover CAS ST and all of the statistics portion of CAS SAbundance of examples and sample exam problems for both Exams SOA P and CAS SCombines best attributes of a solid text and an actuarial exam study manual in one volumeWidely used by college freshmen and sophomores to pass SOA Exam P early in their college careersMay be used concurrently with calculus coursesNew or rewritten sections cover topics such as discrete and continuous mixture distributions, non-homogeneous Poisson processes, conjugate pairs in Bayesian estimation, statistical sufficiency, non-parametric statistics, and other topics also relevant to SOA Exam C.

Brodmann's K. Brodmann 2007-02-16 This is the third edition of the translation, by Laurence Garey, of "Vergleichende Lokalisationslehre der Grosshirnrinde" by Korbinian Brodmann, originally published by Barth-Verlag in Leipzig in 1909. It is one of the major "classics" of the neurological world. Even today it forms the basis for so-called "localisation" of function in the cerebral cortex. Brodmann's "areas" are still used to designate functional regions in the cortex, the part of the brain that brings the world that surrounds us into consciousness, and which governs our responses to the world. For example, we use "area 4" for the "motor" cortex, with which we control our muscles, "area 17" for "visual" cortex, with which we see, and so on. This nomenclature is used by neurologists and neurosurgeons in the human context, as well as by experimentalists in various animals. Indeed, Brodmann's famous "maps" of the cerebral cortex of humans, monkeys and other mammals must be among the most commonly reproduced figures in neurobiological publishing. The most famous of all is that of the human brain. There can be few textbooks of neurology, neurophysiology or neuroanatomy in which Brodmann is not cited, and his concepts pervade most research publications on systematic neurobiology. In spite of this, few people have ever seen a copy of the 1909 monograph, and even fewer have actually read it! There had never been a complete English translation available until the first edition of the present translation of 1994, and the original book had been almost unavailable for 50 years or more, the few antiquarian copies still around commanding high prices. As Laurence Garey, too, used Brodmann's findings and maps in his neurobiological work, and had the good fortune to have access to a copy of the book, he decided to read the complete text and soon discovered that this was much more than just a report of laboratory findings of a turn-of-the-twentieth-century neurologist. It was an account of neurobiological thinking at that time, covering aspects of comparative neuroanatomy, neurophysiology and neuropathology, as well as giving a fascinating insight into the complex relationships between European neurologists during the momentous times when the neuron theory was still new.

The Wheat Rusts – Breeding for Resistance Douglas R. Knott 2012-12-06 The idea for this book was conceived by the late Dr. Irvine A. Watson of the University of Sydney, and he developed the first outline. I was then invited by Dr. Watson to share in its writing. Unfortunately, shortly thereafter, recurring heart problems forced him to curtail his activities and withdraw from the project. He died before the book could be completed. Dr. Watson's intention was to produce a very practical book that would provide wheat breeders with all of the information necessary to breed successfully for resistance to the three wheat rusts: leaf rust, stem rust, and yellow rust. It was intended to be very specific in describing procedures to be used and at the same time provide all of the necessary theoretical background. I hope that I have been successful in meeting these objectives. The book assumes that the reader has some knowledge of plant pathology, genetics, and plant breeding. Extensive use has been made of the literature, but it was not possible to cite all of the papers on a given topic. In making a choice, an attempt was made to choose key papers or more recent papers that provided references to the earlier literature. Acknowledgements This book was written partly at the University of Saskatchewan and partly at the University of California, Davis, while I was on a sabbatical leave.
